Using biometric logins

AI systems can scan fingerprints, retina, and palm prints accurately for biometric logins.

Detecting threats and malicious activities

Cybersecurity firms are training AI systems to detect malware and viruses with the help of several data sets that include algorithms and codes.

Learning with Natural Language Processing

AI-powered systems can automatically collect data by scanning articles, studies, and news about cyber threats and select useful information with Natural Language Processing.

Securing conditional access

AI-powered systems can help create a dynamic, real-time, and global authentication framework that alters access privileges based on location or network.

Cyber Threat Intelligence Workshop Series - Advanced

Workshop Fee: HK$3,200 (May apply up to HK$6,400 subsidy)

Webinar

Cyber Threat Intelligence Workshop Series - Advanced

The primary aim of this workshop series is to trigger structured analytical thinking based on the security skillset that professionals already have. Apart from theory, hands-on lessons are included, the participants will have plenty of chances to involve in threats intelligence! During the lessons, open source and commercial threat intelligence tools, such as OSINT, MISP, Autopsy, Cuckoo Sandbox, Kibana, Grafana, and many more will be covered too!

The CTI Advanced Workshop enables participants to understand, analyse and process actionable information, and to produce basic threat intelligence reports for internal use The workshop also equip participants with hands on incident handling skills to counter basic cyber threats.

Venatron®
Enterprise Security Services

As Venatron Security, we are looking for our investor!

" Venatron Security, entering Cyber Security sector with the motto "Danger is a click away!" in 2011, presents advanced Cyber Threat Intelligence and useful solutions to Venatron NT attendees in order to prevent security breaches.

The primary specialties of Venatron Security compose of Cyber Defence, Cyber Terrorism, Cyber Threats, Cyber Attacks, Cyber Deterrence, Cyber Warfare, Cyber Batties, Cyber Conflicts, Cyber-Physical Systems, Cyber War and Cyber International Relations.

Venatron Security, participating in international studies on critical fields such as Cyber Terrorism, Cyber Intelligence, Information Security, also plays a big role in creating awareness of Cyber Security in Turkey by organizing trainings and conferences in Law-Enforcement Officers, Universities and Public Institutions. "

We are bringing a new perspective to Cyber Security Sector with:
- A Cyber Threat Intelligence and Critical Infrastructure Control and Management Centre
- Two High Tech Softwares
- A cryptographic Hardware
- Nine international field research projects.

For more information: info@venatronsecurity.com

As @Venatron Security we are loo...

Google Cloud

Thank you for participating in Cloud OnAir

April 2020

Hi Danish,

We're glad you joined us at **Cloud OnAir: Remote Working with G Suite**.

In recognition of your attendance, we are pleased to present you with your digital **eCertificate of Participation** below.

We'd love to hear your feedback about the sessions on Day 2 of the event. Please fill out this short survey. This is the same survey shared after the last session of the day, so no need to submit twice if you have already.

All eight sessions and Q&As from both Day 1 & 2 of this online event are now available to view on-demand. You can playback any sessions that you'd like to review, or share the recordings with your team or colleagues.

If you have further questions about remote work and G Suite, you can contact us (select "I want to talk to someone") and fill out the form or give us a call.

See you in the cloud,
The Google Cloud Team

G Suite Google Cloud

In recognition of
Danish Khan

Cyber Threat Intelligence Workshop Series - Advanced

Workshop Fee: HK$3,200 (May apply up to HK$6,400 subsidy)

Webinar

Cyber Threat Intelligence Workshop Series - Advanced

The primary aim of this workshop series is to trigger structured analytical thinking based on the security skillset that professionals already have. Apart from theory, hands-on lessons are included, the participants will have plenty of chances to involve in threats intelligence! During the lessons, open source and commercial threat intelligence tools, such as OSINT, MISP, Autopsy, Cuckoo Sandbox, Kibana, Grafana, and many more will be covered too!

The CTI Advanced Workshop enables participants to understand, analyse and process actionable information, and to produce basic threat intelligence reports for internal use The workshop also equip participants with hands on incident handling skills to counter basic cyber threats.

Cyber Threat Intelligence Workshop Series - Advanced

The primary aim of this workshop series is to trigger structured analytical thinking based on the security skillset that professionals already have. Apart from theory, hands-on lessons are included, the participants will have plenty of chances to involve in threats intelligence! During the lessons, open source and commercial threat intelligence tools, such as OSINT, MISP, Autopsy, Cuckoo Sandbox, Kibana, Grafana, and many more will be covered too!

The CTI Advanced Workshop enables participants to understand, analyse and process actionable information, and to produce basic threat intelligence reports for internal use The workshop also equip participants with hands on incident handling skills to counter basic cyber threats.

Using biometric logins

AI systems can scan fingerprints, retina, and palm prints accurately for biometric logins.

Detecting threats and malicious activities

Cybersecurity firms are training AI systems to detect malware and viruses with the help of several data sets that include algorithms and codes.

Learning with Natural Language Processing

AI-powered systems can automatically collect data by scanning articles, studies, and news about cyber threats and select useful information with Natural Language Processing.

Securing conditional access

AI-powered systems can help create a dynamic, real-time, and global authentication framework that alters access privileges based on location or network.

Google Cloud

Certificate of participation for Cloud OnBoard

March 28, 2019
2:00 PM–6:00 PM

Hi Danish,

We're glad you were able to join us at Cloud OnBoard.

Please find the digital copy of your Recognition of Attendance in this email below.

We look forward to helping you build new projects and ignite your career by becoming Google Cloud Certified.

Wishing you success in the cloud,

The Google Cloud Team

cybersecurity in Section 2.2, a short description of the latest trends follows within the cyber landscape. Section 2.3 describes the characteristics of advanced persistent threats and the common steps of cyber attacks in the form of the cyber kill chain. Section 2.4 analyzes the five past cyber attacks and illustrates the scenarios in detail in order to give an overview of the relevant attack vectors and common tactics, tools, and procedures. Section 2.5 discusses the main categories of threat actors. Finally, Section 2.6 concludes the attack scenarios and common threat actors and their various characteristics and illustrates the most relevant cyber threats today.

2.2 The Definitions of Cybersecurity in a Nutshell

Security in general covers the protection of critical assets from numerous threats posed by various vulnerabilities (Von Solms and Van Niekerk, 2013). Therefore, the determination of assets deserving protection from threats helps to distinguish among the commonly used terms: information security, ICT security, and cybersecurity (see Table 2.1).

The aim of *information security* (IS) is to preserve business continuity and to minimize business damage by limiting the impact of security incidents. According to the international standards, such as the ISO 27002, information security deals with the protection of confidentiality, integrity, and availability of information stored electronically or on paper. The definition of electronically stored information is touching already another area, namely, information and communication technology (ICT). ICT and information technology (IT) are often used synonymously. IT covers a broad range of technologies based on computers, networks, and data storage, whereas ICT describes a broader concept (Von Solms, 2016), including telecommunications infrastructures. This chapter uses the term ICT for the underlying technical infrastructure. Therefore, it can be noted that *ICT security* deals with the protection of technology-based systems, including systems on which information is stored or transmitted, as the common area of these two terms.

#Duplex is coming to the web

Last year's biggest news out of I/O, Google Duplex, came across as a bit of an afterthought this year, dodging concerns about the AI that can make human-like calls in your behalf by making it unable to speak at all on an upcoming version for the #web. In an early demonstration, Google says Duplex can now pull in your information and navigate the web for you to book other things like car rentals and movie tickets. Instead of just confirming a booking for you, users can scan the auto-filled forms to approve what Duplex has written in before moving forward.

All of this was packed into a segment about how #Google Assistant will just get smarter in general, helping users reply to messages, write emails (even subject lines), insert images in messages, or get directions to personalized results (mom's house) by using just your voice. It'll also be available in driving mode soon (not to be confused with Android Auto) to continue functioning while it's navigating on Google Maps. You will soon be able to make #GoogleAssistant stop talking or blaring alarms by simply by saying "Stop" instead of the full "Hey Google" prompt.

All of these voice features were teased as coming to "new #Pixel phones later this year," so interpret that cryptic statement as you will.

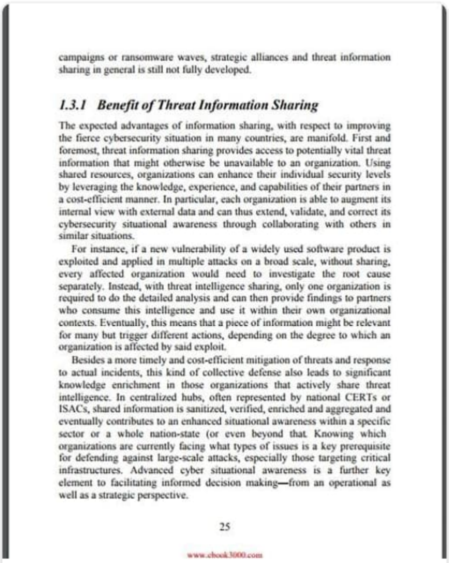
Cyber Threat Intelligence | marlabs

On the other hand, External Threat Intelligence comprises of intelligence that is acquired from outside the environment. This could be information gathered via subscriptions to different information sources like feeds shared within the community, information from similar industries, governments, and other intelligence agencies, and/or other crowdsourced platforms.

Challenges and Limitations



campaigns or ransomware waves, strategic alliances and threat information sharing in general is still not fully developed.

1.3.1 Benefit of Threat Information Sharing

The expected advantages of information sharing, with respect to improving the fierce cybersecurity situation in many countries, are manifold. First and foremost, threat information sharing provides access to potentially vital threat information that might otherwise be unavailable to an organization. Using shared resources, organizations can enhance their individual security levels by leveraging the knowledge, experience, and capabilities of their partners in a cost-efficient manner. In particular, each organization is able to augment its internal view with external data and can thus extend, validate, and correct its cybersecurity situational awareness through collaborating with others in similar situations.

For instance, if a new vulnerability of a widely used software product is exploited and applied in multiple attacks on a broad scale, without sharing, every affected organization would need to investigate the root cause separately. Instead, with threat intelligence sharing, only one organization is required to do the detailed analysis and can then provide findings to partners who consume this intelligence and use it within their own organizational contexts. Eventually, this means that a piece of information might be relevant for many but trigger different actions, depending on the degree to which an organization is affected by said exploit.

Besides a more timely and cost-efficient mitigation of threats and response to actual incidents, this kind of collective defense also leads to significant knowledge enrichment in those organizations that actively share threat intelligence. In centralized hubs, often represented by national CERTs or ISACs, shared information is sanitized, verified, enriched and aggregated and eventually contributes to an enhanced situational awareness within a specific sector or a whole nation-state (or even beyond that. Knowing which organizations are currently facing what types of issues is a key prerequisite for defending against large-scale attacks, especially those targeting critical infrastructures. Advanced cyber situational awareness is a further key element to facilitating informed decision making—from an operational as well as a strategic perspective.

Identification
Prevention
Cyber security risk framework
Response and Recovery
Detection
Chart Area

Identification
- Identify critical information, data, systems and risks
- Security capability of third parties
- Threat and risk exposure, expected losses
- Roles, responsibilities and accountabilities

Prevention
- Board approved policy, enterprise-wide IT risk management framework
- Data security and access controls, strict IT security framework, protocols and oversight
- Risk assessment, security across all apps, systems, channels & end points
- AI, big data, ML for real time threat analysis
- Strong employee training and customer education
- Security cu[illegible] concise procedures to prevent human errors

Response and Recovery
- Incident response management framework, people and processes
- Crisis management action plans and communications processes
- Business continuity plans
- 'War rooms' for faster response
- Incident reporting

Detection
- Centralised security operation and command centres to detect & mitigate threats and attacks.
- Strong vulnerability and resilience testing
- Intelligence-led testing and detection framework
- Industry collaboration, intelligence sharing, coordinated vulnerability disclosure
- Multilayered detection using analytics and AI

#Android will soon offer live subtitles on all #videos

#Google is bringing Live Caption to all videos. When you watch a #video, whether it's on your camera roll, on an app / the web, or even video chats, Google can soon begin adding subtitles to what is being said right underneath. The #company says it's built this for people who are deaf or hard of hearing, but some people might also use this when they're watching videos in public and want to keep the volume low or while they're on a call.

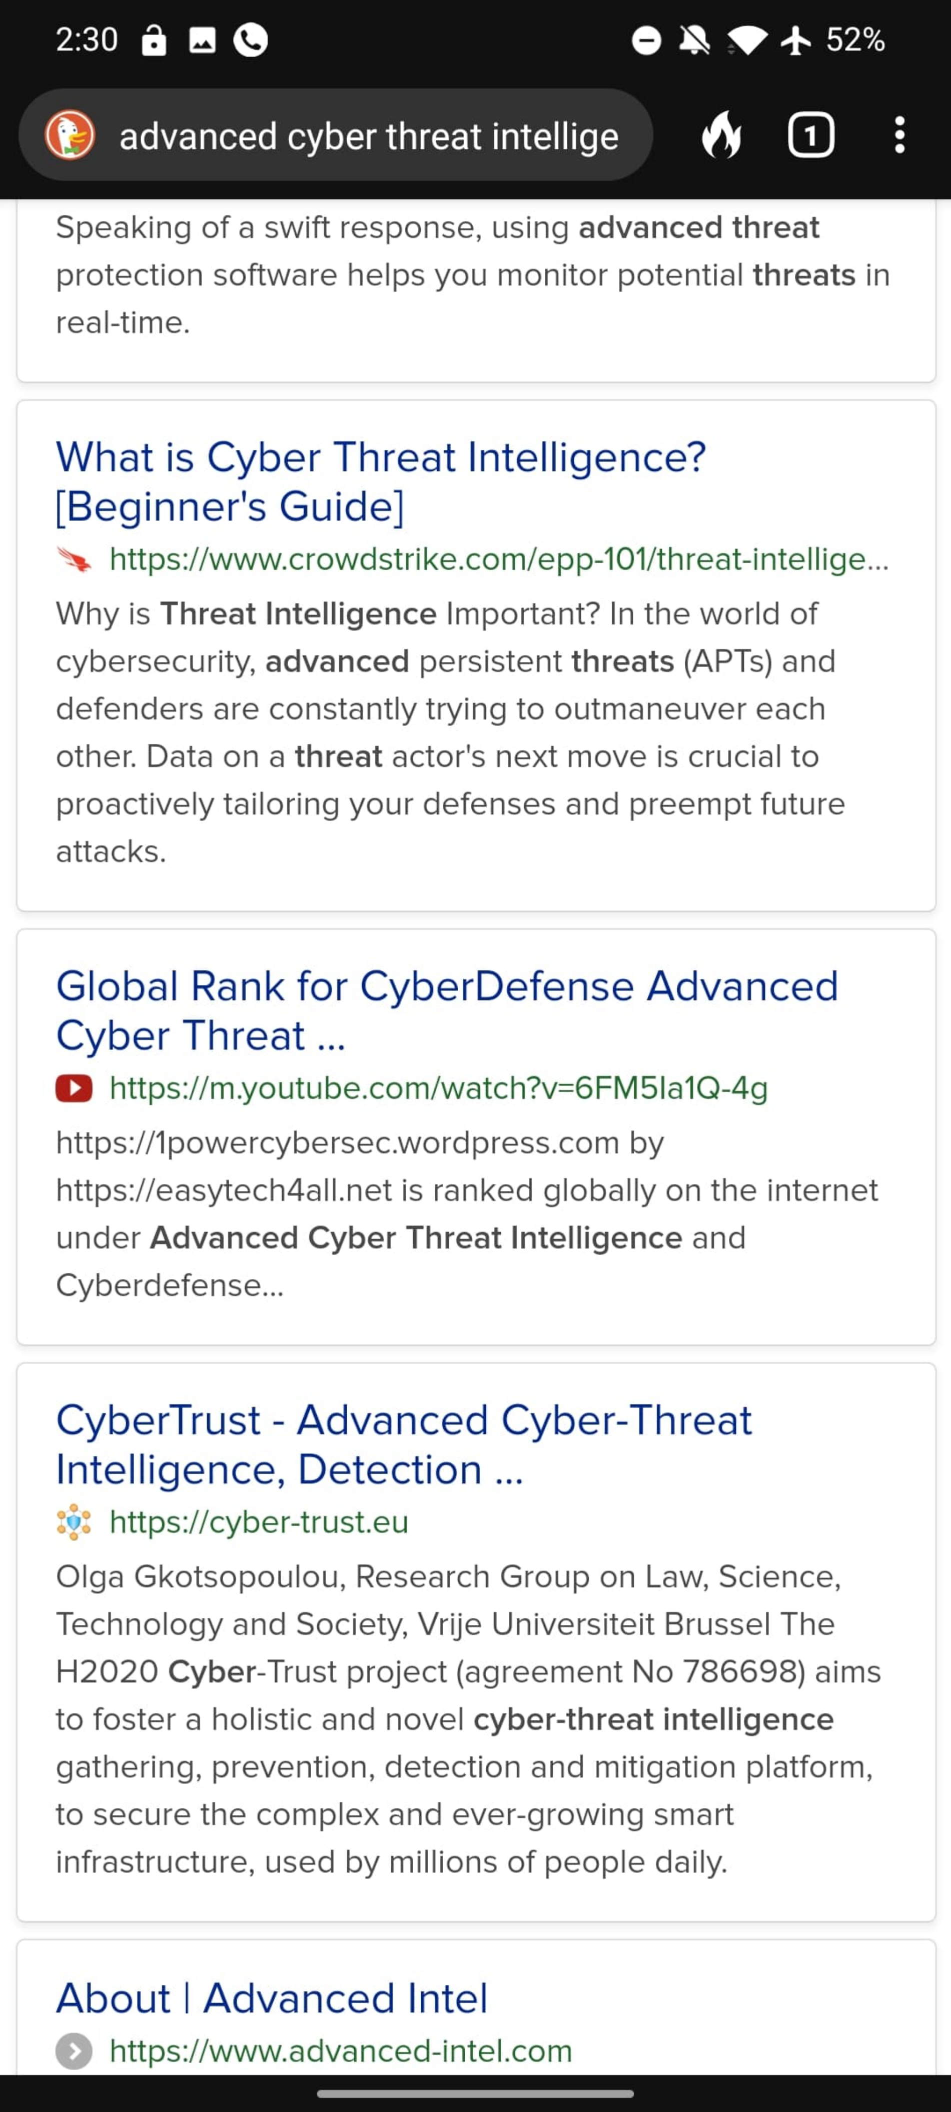
The Complete Cyber Security Course : Hackers Exposed!
@easytech4all
Cybersecurity. Advanced Cyber Threat Intelligence. Harvard Square. Internet Society.



Speaking of a swift response, using **advanced threat** protection software helps you monitor potential **threats** in real-time.

What is Cyber Threat Intelligence? [Beginner's Guide]

https://www.crowdstrike.com/epp-101/threat-intellige...

Why is **Threat Intelligence** Important? In the world of cybersecurity, **advanced** persistent **threats** (APTs) and defenders are constantly trying to outmaneuver each other. Data on a **threat** actor's next move is crucial to proactively tailoring your defenses and preempt future attacks.

Global Rank for CyberDefense Advanced Cyber Threat ...

Google Cloud

Thank you for participating in Cloud OnAir

April 2020

Hi Danish,

We're glad you joined us at **Cloud OnAir: Remote Working with G Suite**.

In recognition of your attendance, we are pleased to present you with your digital **eCertificate of Participation** below.

We'd love to hear your feedback about the sessions on Day 2 of the event. Please fill out this short survey. This is the same survey shared after the last session of the day, so no need to submit twice if you have already.

All eight sessions and Q&As from both Day 1 & 2 of this online event are now available to view on-demand. You can playback any sessions that you'd like to review, or share the recordings with your team or colleagues.

If you have further questions about remote work and G Suite, you can contact us (select "I want to talk to someone") and fill out the form or give us a call.

See you in the cloud,
The Google Cloud Team

G Suite
Google Cloud

In recognition of
Danish Khan

Dan Hoeyer

Sponsored Thursday

An exclusive invitation for you

Dear Danish,

Congratulations! Your skillset and experience stand out and qualify you for our Indian Chapter of Leaders Excellence at Harvard Square, **an exclusive, invitation-only club** for leaders. As the president, I would like to personally invite you to apply for membership to our prestigious organization.

If approved, you'll become a certified member of a highly selective members' club located at Harvard Square. Get access to a host of powerful benefits that help you build your professional network, discover new opportunities and advance your leadership.

You'll be in good company, too: Join **500+ top Indian leaders** in mid- to senior level management from Tata, Microsoft, SAP, Oracle, IBM, Ericsson, Novartis, Barclays, HSBC, Citibank, RBI, KPMG, PwC, Deloitte, Accenture and other leading organizations.

EXCLUSIVE, MEMBERS-ONLY BENEFITS:

- **Gain a distinctive credential**: Receive an official, uniquely numbered membership certificate and use of the MLE℠ title, a MA-registered service mark.
- **Build your leadership capabilities** through

Walnut Money Manager - Budget ...
Walnut - #1 Expense Tracker India
3+
7.8 MB • 4.4 ★ • 5 million

Why we love this

1. This robust money management tool will help you track your spending, pay bills, send money to friends and more
2. Create, manage and chat within groups to split expenses, keep track of common bills and settlements
3. The "Walnut Prime" subscription can also help you get a quick line of credit in times of need

Walnut keeps track of all your electronic payments, savings, and credit card accounts by reading your sms. You can record cash transactions manually. It also helps locate active ATMs, plan budgets, and set payment reminders. 'Insights' give you a highly detailed analysis of your long term spends.

The Cyber Threat Intelligence Perception Gap

Research findings reveal a gap in perceptions and use of cyber threat intelligence. On one hand, companies recognize the importance and effectiveness of cyber threat intelligence and are willing to allocate resources towards it. On the other hand, companies are critical of cyber threat intelligence solutions, citing false positives and alarm fatigue as specific pain points.

Companies with a security breach in the last 24 months:

80% believe threat intelligence could have prevented cyber attack consequences.

76% say threat intelligence has proven effectiveness.

80% say fee-based threat intelligence is better than free options.

67% say they will increase cyber threat spending in the next two years.

BUT

53% say threat intelligence is not essential to strong security posture.

The most common threat intelligence: Software updates and security patches 68%

64% of companies flag threat indicators

57% Malicious IP address
55% Malware
50% Malicious Mobile Apps
46% Malicious URLs
33% Suspicious phishing and spoofing URLs

56% believe threat intelligence becomes stale within minutes, but 54% say threat information is not timely.

Clear guidance for action is of top importance, but 46% say threat information is not actionable.

Companies lacking confidence in cloud-managed security: 52%

How can we use threat intelligence effectively?

Real-time, PC-to-PC intelligence 68%
Reputation intelligence/IP monitoring 60%
Monitor data changes within infrastructure 54%
Monitoring unknown objects on network 53%

Source: "Importance of Cyber Threat Intelligence to a Strong Security Posture," a study by Webroot and The Ponemon Institute. April 2015. www.webroot.com/shared/pdf/CyberThreatIntelligenceReport2015.pdf.

ThreatDNA
Why is the cyber threat landscape changing?
Threat actors are constantly inventing new tools and techniques to enable them to get to the information they want and are getting better at identifying gaps and unknown vulnerabilities in an organization's security.

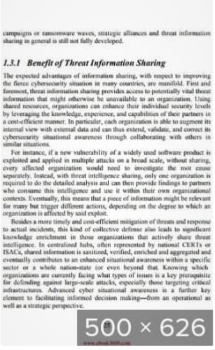
Preventing Advanced Persistant Threat - Threat...
gsecurelabs.com



campaigns or ransomware waves, strategic alliances and threat information sharing in general is still not fully developed.

1.3.1 Benefit of Threat Information Sharing

The expected advantages of information sharing, with respect to improving the fierce cybersecurity situation in many countries, are manifold. First and foremost, threat information sharing provides access to potentially vital threat information that might otherwise be unavailable to an organization. Using shared resources, organizations can enhance their individual security levels by leveraging the knowledge, experience, and capabilities of their partners in a cost-efficient manner. In particular, each organization is able to augment its internal view with external data and can thus extend, validate, and correct its cybersecurity situational awareness through collaborating with others in similar situations.

For instance, if a new vulnerability of a widely used software product is exploited and applied in multiple attacks on a broad scale, without sharing, every affected organization would need to investigate the root cause separately. Instead, with threat intelligence sharing, only one organization is required to do the detailed analysis and can then provide findings to partners who consume this intelligence and use it within their own organizational contexts. Eventually, this means that a piece of information might be relevant for many but trigger different actions, depending on the degree to which an organization is affected by said exploit.

Besides a more timely and cost-efficient mitigation of threats and response to actual incidents, this kind of collective defense also leads to significant knowledge enrichment in those organizations that actively share threat intelligence. In centralized hubs, often represented by national CERTs or ISACs, shared information is sanitized, verified, enriched and aggregated and eventually contributes to an enhanced situational awareness within a specific sector or a whole nation-state (or even beyond that. Knowing which organizations are currently facing what types of issues is a key prerequisite for defending against large-scale attacks, especially those targeting critical infrastructures. Advanced cyber situational awareness is a further key element to facilitating informed decision making—from an operational as well as a strategic perspective.

WHO'S WHO IN RUSSIAN CYBER ESPIONAGE?
CYBER CRIMINALS AND HACKTIVISTS
FSO
FSB
SVR
GRU
Federal Protective Service of the Russian Federation
Federal Security Service of the Russian Federation
Foreign Intelligence Service of the Russian Federation
Main Intelligence Directorate of the General Staff of the Armed Forces of the Russian Federation
SPETSSVJAZ
16th CENTRE
18th CENTRE
6th DIRECTORATE
TURLA Snake/Uroburos
APT29 The Dukes/Cozy Bear
APT28 Sofacy/Fancy Bear

The FSO's Spetssvyaz sub-unit organizes national government and military communications and ensures the security of the data transmitted along these channels.

The 16th Centre is the FSB's's main signals and cyber intelligence unit. The cyber operations of the FSB's 18th Centre may have targets outside state borders.

In the cyber sphere, the SVR's activity level and capabilities are not comparable to the other Russian special services, but the SVR is engaged in developing its cyber capability.

From the Russian territory, the GRU actively carries out signals and cyber intelligence around the world, possessing the best technological capability among all Russian special services.

APT – or Advanced Persistent Threat – carefully targeted, long term cyber operations in the course of which attackers combine multiple techniques to obtain the needed information about the target.

The role of Cyber Threat Intelligen...
blog.eccouncil.org

Mirror APTs	Undiscovered APTs	Deceptive APTs
An APT group that leverages the exact TTPs as a well-known APT group and thus can continue to operate under a 'stolen' identity.	An APT group that leverages only attack types which are undiscovered. They use only net-new tactics and techniques.	A combination of Mirror and Undiscovered APTs where an APT group impersonates another APT tries to cover its actual identity while using net-new tactics and techniques to accomplish its primary objective.

Infection	Typically, well-crafted spear phishing e-mails with linked or embedded files containing malicious code serve as the intrusion vector.
Establish Backdoors	Attackers maintain network footholds by obtaining domain administrative credentials and moving laterally through a network, establishing multiple backdoors.
Enumerate the Network	Persistent threat intruders laterally enumerate a network gathering valid credentials (user accounts and passwords) for multiple systems.
Install Utilities	Attackers install any number of several malicious utilities necessary to maintain persistence and ultimately steal information.
Escalate Privileges	With access and persistence established, intruders escalate their privileges and prepare for exfiltration.

assets and data and utilize techniques that bypass traditional defenses. RSA helps organizations enhance their existing security capabilities and implement countermeasures designed to prevent cyber adversaries from achieving their objectives. Services offered by RSA include gap analysis, maturity modeling, cyber threat intelligence, infrastructure hardening and security operations development and automation. Services are designed to help organizations converge their technical and operational capabilities into a unified security program that aligns with risk management priorities and business objectives. RSA emphasizes the preventive measures required to protect the organization while also providing incident response and remediation services to reduce breach exposure time and to mitigate attacks.

RSA® Education Services provide training courses on information security geared to IT staff, software developers, security professionals and an organization's general employees. Courses are taught by security experts from RSA's Advanced Cyber Defense Practice and combine theory, technology, and scenario-based exercises to engage participants in active learning. The current curriculum covers topics such as malware analysis and cyber threat intelligence. RSA Education Services also offers a workshop on addressing advanced threats such as APTs. Courses are designed to deliver the maximum amount of information in the shortest period to minimize staff downtime.

RSA® Enterprise Compromise Assessment Tool (ECAT) is an enterprise threat detection and response solution designed to monitor and protect IT environments from undesirable software and the most elusive malware—including deeply hidden rootkits, advanced persistent threats (APTs) and unidentified viruses. RSA ECAT automates the detection of anomalies within computer applications and memory without relying on virus signatures. Instead of analyzing malware samples to create signatures, RSA ECAT establishes a baseline of anomalies from "known good" applications, filtering out background noise to uncover malicious activity in compromised machines. The RSA ECAT console presents a centralized view of activities occuring within a computer's memory, which can be used to quickly identify malware, regardless of whether a signature exists or if the malware has been seen before. Once a single malicious anomaly is identified, RSA ECAT can scan across thousands of machines to identify other endpoints that have been compromised or are at risk.

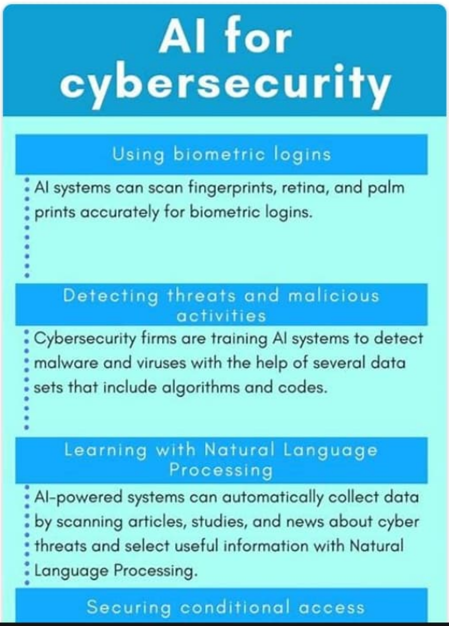
Cyber Threat Matrix



AI for cybersecurity

Using biometric logins

AI systems can scan fingerprints, retina, and palm prints accurately for biometric logins.

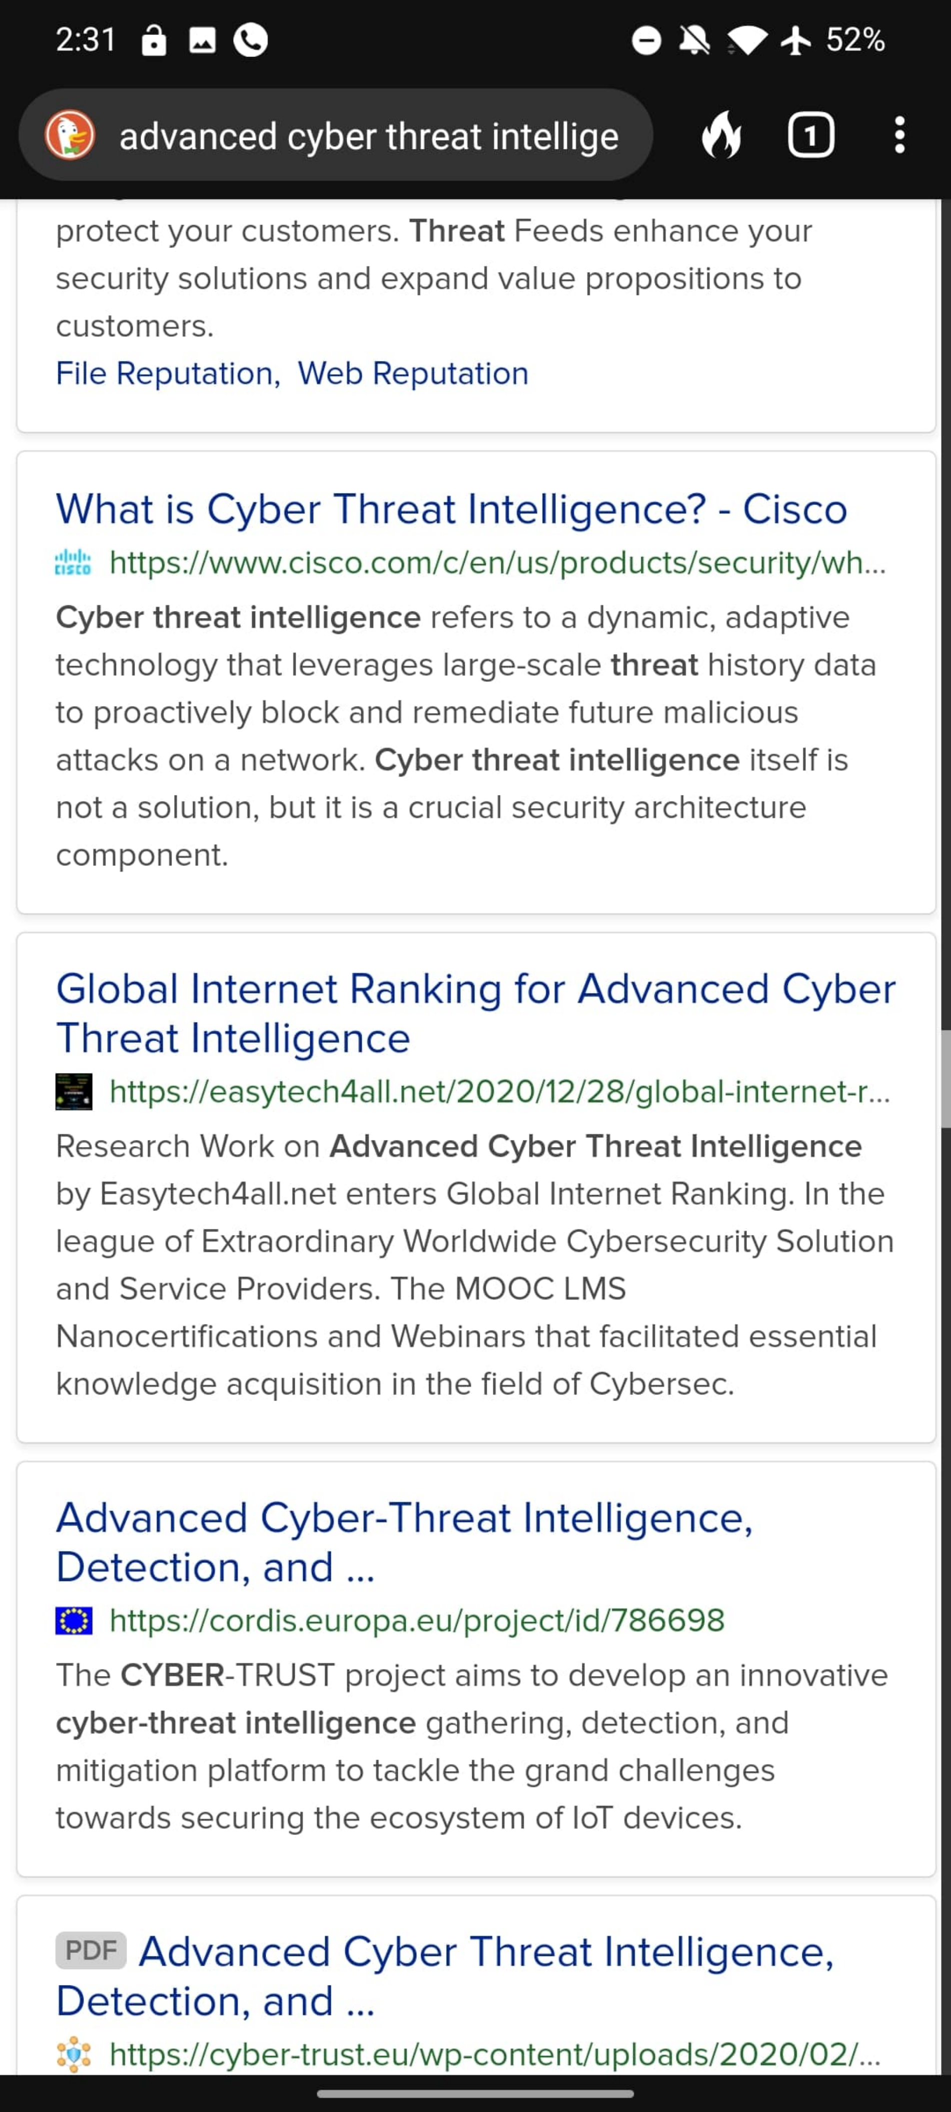
Detecting threats and malicious activities

Cybersecurity firms are training AI systems to detect malware and viruses with the help of several data sets that include algorithms and codes.

Learning with Natural Language Processing

AI-powered systems can automatically collect data by scanning articles, studies, and news about cyber threats and select useful information with Natural Language Processing.

Securing conditional access



protect your customers. **Threat** Feeds enhance your security solutions and expand value propositions to customers.

File Reputation, Web Reputation

What is Cyber Threat Intelligence? - Cisco

https://www.cisco.com/c/en/us/products/security/wh...

Cyber threat intelligence refers to a dynamic, adaptive technology that leverages large-scale **threat** history data to proactively block and remediate future malicious attacks on a network. **Cyber threat intelligence** itself is not a solution, but it is a crucial security architecture component.

Global Internet Ranking for Advanced Cyber Threat Intelligence

https://easytech4all.net/2020/12/28/global-internet-r...

Research Work on **Advanced Cyber Threat Intelligence** by Easytech4all.net enters Global Internet Ranking. In the league of Extraordinary Worldwide Cybersecurity Solution and Service Providers. The MOOC LMS Nanocertifications and Webinars that facilitated essential knowledge acquisition in the field of Cybersec.
